PROFILE

Dedicated and detail-oriented professional transitioning from the trades into tech. Proven ability to balance a strong work ethic, ongoing education, and self-driven coding projects. Recognized for strong problem-solving skills, attention to detail, and a hands-on approach to learning. Passionate about solving real-world challenges and building functional applications. Seeking an opportunity to launch a development career in a professional setting while continuing to grow and expand technical expertise.

EDUCATION

University of Richmond

Edx Software Development Coding Bootcamp
2024

John Tyler University - Brightpoint

Associates of Applied Science
Information Technology
2019 - 2022

CERTIFICATES

Google via Coursera

IT Automation with Python
2023

freeCodeCamp

Responsive Web Design
2024

Javascript Algorithms and Data Structures
2025

PROFESSIONAL EXPERIENCE

2019
-
Present

Custom Rug Fabricator, Warehouse Manager

House of Carpet | 10625 Trade Rd, Richmond VA

- Create high-end custom rugs and stair runners by interpreting client specifications, applying advanced fabrication techniques, and ensuring precision craftsmanship in every project.
- Maintain exceptional attention to detail in carpet cutting, edge binding, sewing machine upkeep, pattern alignment, and execution of intricate templates and geometry.
- Independently managed warehouse operations including shipping/receiving, forklift operation, inventory tracking, deliveries, and internal software systems.
- Demonstrated strong problem-solving and time management skills through solo oversight of end-to-end production and logistics.

2015
-
2018

Pest Control Technician

Mosquito Authority | Raleigh, NC

- Delivered residential pest control services with a focus on safety, long-term solutions, and client satisfaction.
- Earned North Carolina Structural Pest Control License (Green Card Certified), demonstrating knowledge of industry regulations and safety protocols.
- Operated and maintained company vehicle daily while delivering timely, route-based services.
- Developed strong communication skills through direct client interaction and reliable service delivery.

2014
-
2015

Printing Industry

Docusource | Raleigh, NC

- Contributed to efficient printing production of books, brochures, business cards, and other printed media.
- Collaborated closely with team members to maintain high quality standards and seamless workflow.
- Maintained a high level of responsibility through the operation of heavy machinery and printing equipment, ensuring consistent accuracy and production speed.

TECHNICAL SKILLS

Full-Stack Web Development

- Proficient in modern web design with HTML, CSS, Javascript
- Experience with the MERN Stack: MongoDB, Express.js, React.js (Hooks, Context API), Node.js
- Built scalable, component-based web applications using React and TypeScript, with a focus on state management, routing, and reusable UI patterns
- Designed and managed MongoDB Atlas schemas for scalable data storage
- Developed RESTful APIs with Express & Node.js, handling data validation, middleware integration, and CRUD operations

API Development & Integration

- Integrated real-world data from OpenWeather, Google APIs, TMDB, and OpenAI into full-stack applications
- Built and optimized GraphQL APIs using Apollo Server and MongoDB for efficient, flexible data querying
- Developed robust API endpoints with middleware logic for validation, error handling, and third-party service integration

Frontend Engineering

- Created responsive UIs using React, TypeScript, and CSS Flexbox/Grid
- Enhanced UI/UX with custom hooks, state management, and accessibility best practices
- Developed interactive dashboards with real-time API data processing

Security & Performance Optimization

- Secured sensitive user data with JWT encryption, bcrypt hashing, and role-based access control to protect user sessions and private routes
- Optimized backend performance through efficient MongoDB queries, indexing strategies, and selective data caching
- Applied robust error handling, logging, and debugging techniques to improve system stability and developer experience

AI & Automation

- Built a fine-tuned AI chatbot leveraging OpenAI models for intelligent user assistance
- Automated data retrieval and processing with Python scripting and web scraping tools
- Designed and developed a Chess AI game with React and Node.js, featuring bot opponents powered by scaling difficulty algorithms — including heuristic move evaluation and a Minimax strategy — with built-in move tracking and game state management.
